## Discover your genetic disposition to disease – and help ensure you don't fall ill!

# Toxo | guard

Dear Client,

Today's medicine enables an insight into your personal genetic disposition.

By knowing your genes, you can avoid harmful environmental conditions and optimize your lifestyle in order not to cross the disease threshold (see figure).

The "Guards" are tests developed for you on the basis of cutting-edge science and technology. The test results reveal your personal risk profile and are the basis for attaining an optimum healthy lifestyle and preventing disease.

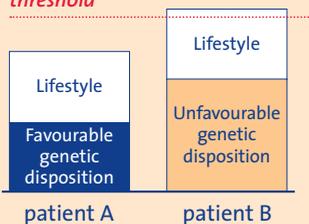

At Bioglobe, we want to help you live a longer and healthier life.

Professor Wolfgang Hoepfner  
Bioglobe Laboratory for Molecular Genetics

### Increased risk of disease due to a person's genetic disposition

*Disease threshold*

Due to his genetic position, patient B has to optimize his life style to prevent disease.

Toxo Guard is a genetic test that determines your body's capacity for detoxifying harmful substances.

The human body is able to neutralize toxic substances generated in its own metabolic pathway or taken up from the environment. The liver in particular, but also the kidney and other organs, are involved in detoxifying reactions.

### If a person's system is overloaded with toxic substances, the risk of the following health problems increases:

- cancer
- inflammation
- neurodegenerative diseases
- allergies
- adverse drug effects
- gastro-intestinal disease
- chronic fatigue syndrome
- multiple chemical sensitivity

The genetic variability of the enzymes involved in detoxification can be extremely high from one person to another. Toxo Guard can determine which compounds a person's body can cope with and which are dangerous and may give rise to health problems. This also applies to many drugs. The results of these tests can help you avoid exposure to certain compounds, food ingredients or drugs and prevent severe health problems.

### **A wise investment**

Tests for genetic disposition are scientifically founded and make good medical sense. The costs involved in undergoing these tests are a wise investment in the protection of your health.
